#### Self-Evaluation

Tyler Kelley

My tasks during this sprint was to implement the final design of the front end. After the final design was taken care of I then had to make sure all of the buttons and text areas all worked properly so the user can create shapes based on what they want in the system. I decided to add methods where a default shape would be created if the user decided to not input any values or correct values. Once all of that was done my next task was to get the front end to be compatible with the backend, sadly we ran out of time for the backend to actually be implemented in this sprint, but before our presentation we plan to connect the front end to the backend with ease since it will already be compatible.

Grade A+

Percentage of work 30%

I completed all of my tasks available to me

I was incredibly involved

#### Team member evaluation

Sprint 01 Team Review

CS 3321

This person was not present or involved.

Team member evaluation

Steven Yerka

Grade C-

Percentage of work 10%

This person completed most of the work but other group members completed more and were more involved

Team Use of Scrum and Essence

Daily scrum is once again being used properly throughout the weeks of the project. Each scrum master and product owner is being rotated properly throughout each sprint. We have now realized the value of iterative design as the use of essence wasn't nearly enough incorporated in this sprint and it cost the team deeply.
