## PI 05 - Alpha Release

Assigned: March 20, 2020  
Due: April 10, 2020 @ 23:00h

### Project Iteration 5: Alpha Release

This iteration follows the format of the iteration 4 assignment.

- You should have your core app working for this iteration.
- We still expect bugs to occur and for numerous features to be missing.
- We are beginning to focus on code quality now. Remember all those design principles, patterns, etc? For iterations 5 and 6 a larger focus is on refining your code. We will be looking over your code and giving suggestions for improvement.
- The only new requirement is that you must also supply a packaged version of your app. This means either an .exe (Windows), .pkg/.dmg (macOS) or package managers in Linux. Talk with your instructor for details.
- Don't forget to keep up (or improve if lagging) your git workflow, testing, deployment/README, project boards, changelog, etc mentioned in previous iteration assignments.

### Submission

- By the due date your team needs to produce a release which is merged into master and tagged as "Iteration 05"
- This tagged version of your code is what will be evaluated.
