Practicum

Working within your team.

1. Consider the activities, work products, and alphas of the Microservice Lite practice

2. How will you integrate this practice into your project?

3. How many services will your application need?
   - Minimum will require at least the following services:
     - A backend to serve data to each UI
     - A web front-end using Vue.js
   - Could you see possibly subdividing the backend into more than one service?
