Self-Evaluation:

Braxton Soto

This sprint I added tests, created a github Actions workflow for CI, and created a Github Actions workflow for pushing a docker image to AWS ECR.

A-

Team Use of Scrum and Essence

We have approached this project with an iterative approach, where we each are working on our own tasks to get our project up and running, and reporting to each other at each team meeting. We assign new product owners and scrum masters every new Sprint. The product owner keeps track of our product board during each sprint.
